BELGRADE

Build Your Pitch

Structured, convincing & in 10 minutes

Vanja Milutinović
Managing Director @ GDG Belgrade

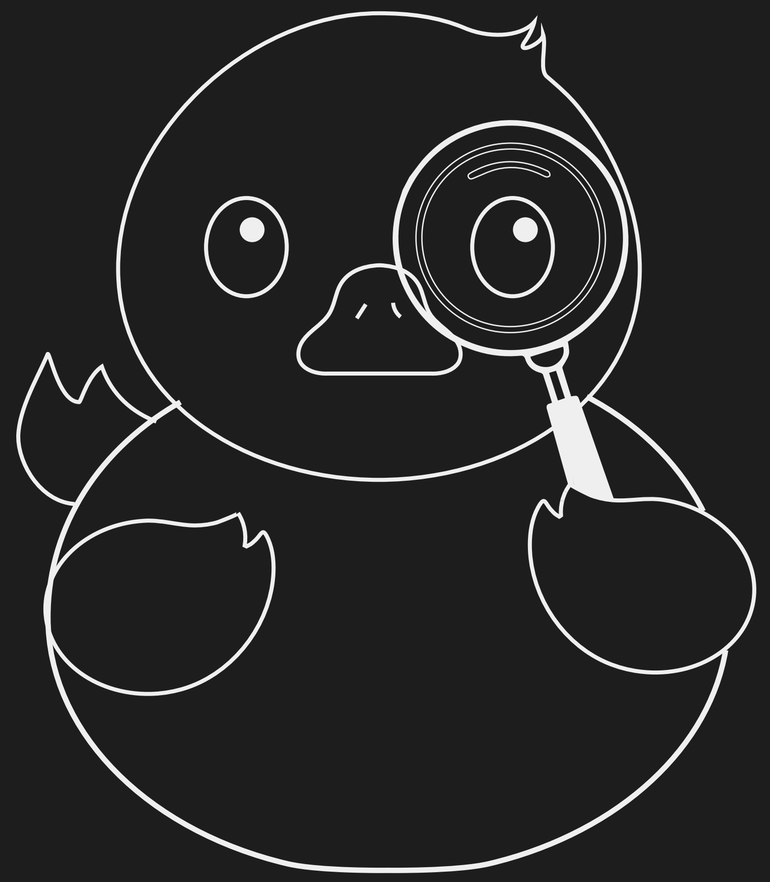
Build with AI

The Goal Of This Workshop

- Help you structure your presentation
- Focus on the judges’ criteria
- Prepare the 10-minute pitch
- Answer questions during your presentation
- Choose the presenter(s)

Agenda

- Criteria
- Structure
- Advice for your pitch
- Practice
- Q&A



Evaluation Criteria

Problem
- Relevancy
- User Research & Feedback
- Future Plans

Business
- Target Personae
- Monetization
- Product-Market Fit

Technology
- Architecture & Tools
- Completion & Real Usage
- Code Testing
- Scalability

Delivery
- Pitch
- Presentation

Problem

1. Is the problem clearly defined?
2. Is the defined problem relevant to the competition?
3. User feedback
    a. Did the team conduct research involving real users?
    b. Did the team take the research findings into account and adapt the application accordingly?
4. Did the team adequately address the identified problems?
5. What is the potential for expansion beyond the local market?

Technology

1. The architecture and high-level components need to be defined. What Google technologies are used?
2. Have all components been implemented?
3. Has at least one problem encountered during implementation been highlighted, along with how it was resolved?
4. Did the team present the actual use of the application (not a mockup)?
5. How scalable is the solution in its current state?

Business

1. Are target personae and market need clearly defined?
2. Did the team research the market and competition?
3. Are there a sustainable monetization model and realistic revenue?
4. What are the cost and resources needed for development?
5. Who are the users? Who are the buyers?

Delivery

1. Is the presentation visually consistent?
2. Does the presentation contain all of the necessary information? Is the presentation overcrowded?
3. Does the pitch contain all of the necessary information?
4. How engaging was the pitch?
5. Was the complete pitch delivered in time?

Pitch structure

1. The problem
2. Target Personae & Research
3. The solution & Demo
4. Technologies & Testing
5. Future plans

Slide-by-slide structure

1. Title page
2. The problem
3. Users & Feedback
4. The Solution & The Demo
5. Technical Architecture
6. Google technologies & AI Tools
7. Testing & Challenges
8. Scalability
9. Conclusion + Q&A

Advice for your pitch: Content

1. Nothing’s implied - Say it out loud!
2. AI - Where is it & Why is it important?
3. Demo - Focus on functionalities, not the design
4. Highlight the bottom line

Advice for your pitch: Presentation

1. Time yourself
2. 8–9 minutes of prepared speech & 1–2 minutes for back-up
3. Don’t read the slides. Present!
4. Coordinate the team
5. **Practice!**

Advice for your pitch: Additional

1. Wide stance - Relax your knees
2. Open your arms
3. Smile
4. Breathe & Control your voice
5. **Slow down!**

Advice for your pitch: Q&A

1. Be direct
2. Be honest
3. Don’t talk about things we didn’t ask about
4. Don’t say “Good question” or “Interesting question”
5. Think before you answer

Conclusion

Focus on the bottom line

Highlight the problem and how you solved it. Don’t spend time on details not essential to the problem. We will ask what we need explained more!

A slide for each criteria

Don’t answer multiple criteria questions on the same slide. Separate them!

The Best Pitch
Direct, Clear, Well-Timed

AI for All

Bridging the Accessibility Gap

Action-oriented solutions for real-world accessibility challenges...

Sensory Substitution & Real-Time Assistance

Focus:
Visual, hearing, and speech impairments.

Challenge:
Build an agentic system that acts as a sensory bridge. Use Vertex AI's multimodal capabilities (Gemini) to interpret the world for those who cannot see, hear, or speak.

Frictionless Digital Inclusion (The "Grandparent" Agent)

Focus:
Senior citizens and the technologically illiterate.

Challenge:
Traditional UIs (buttons, menus, small text) are barriers. Create a "Zero-UI" agent that allows users to interact with complex digital services (e-government, banking, healthcare) through natural, local language conversation.

Cognitive Support & Adaptive Living

Focus:
Individuals with dementia, sensory issues or cognitive disabilities.

Challenge:
Navigating a fast-paced world is overwhelming for many. Design an agent that simplifies complexity — whether it’s breaking down complicated news, managing daily routines, or providing emotional grounding in stressful environments.
